

What makes Metal Sign & Label Aluminium so special are the unique processes which reproduce images within lustrous durable anodised aluminium. Anything that can be photographed or captured digitally on computer can be reproduced. From the smallest typeface to the most intricate design, photograph, barcode, logo or graphic.

Computer generated artwork from most formats can be used. All are reproduced with exceptional clarity and protected by a sapphire hard surface that can withstand even the most severe environmental conditions.

The image is permanently embedded within the clear anodic layer. High UV resistance, no chipping or peeling and not being affected by solvents or most chemicals ensures a durable image. The versatility of Metal Sign & Label Aluminium makes it ideally suited to a wide range of uses....your imagination is the only limit!

## **3 PRINTING PROCESSES** TO ALWAYS MEET YOUR NEEDS

### Metalprint

Digital printing eliminates the need and cost for film or screens. Multiple colours with low set up costs and economical printing for both short and long print runs from computer generated files. Easy inclusion of bar codes, sequential numbers or variable text from most word processor, data base or spreadsheet programmes.

### Metalphoto

Specialist applications requiring very thin and flexible metal stock with excellent durability and fine detail black print. Not used for colour printing.

### Metalpremium

Premium colour printing for fine detail, photographs.

#### **Product marking**

- name plates
- machine face plates
- machine instruction labels
- mimic panels
- sequential / serial numbering bar codes
- CAD generated schematics
- short run prototypes

#### **Compliance plates**

- VIN plates (trailers)
- HIN plates (boats)
- rating / capacity plates
- statutory compliance plates

#### **Interpretive signs**

- maps and guides
- botanic and zoological labels
- mounting stands & hardware

#### **Plaques**

- presentation certificates
- award certificates
- commemorative plaques

#### **Asset marking**

- sequentially numbered labels
- asset identification

#### **Architectural signage**

- directory boards
- directional signs
- room identification
- fire indicator panels
- statutory signs
- plant room labeling
- safety signs

#### **Identification products**

- name badges
- business cards
- key ring tags
- pet name tags

**durable**  
**high quality**  
**multi colour**  
**labels & signs**

## Black or Multicolour

Colour adds impact for minimal cost increase or use the "classic" durability of black on silver. No matter what effect you wish to create or the colours you need, we can help. Exact colour matches are not always possible but we always endeavour to match as close as possible.

## Scratch Resistant

Scratch resistant, not scratch proof, but much better than most other processes. The anodic layer is sapphire hard, only slightly softer than window glass. Determined vandals can still damage our signs but they will have to work hard.

## No Rust or Rot

Metal Sign & Label coloured anodised aluminium will not rust, rot or corrode away.

## Chemical & Solvent Resistant

Printed aluminium is not affected by most chemicals or long term exposure to solvents, oil and grease.

## Graffiti Proof Signs

We can not stop graffiti artists but we can quickly remove their painted efforts. The printed image is sealed within the anodic layer of the aluminium and is not affected by solvents or cleaners. The smooth surface is easily cleaned.

## Colour Fastness & UV Resistance

We can guarantee black print not to fade but all other colours will fade over time. How quickly colours fade will depend on the colour printed and the degree of exposure to ultra violet light. Ask us for more details.

## You Want How Many

We will print one only or thousands. Low volume print runs are no problem. We can make prototypes or full production runs to meet your requirements.

## Special Shapes

We can cut "special shapes" or "cut outs" for instrument face plates and machinery name plates on our specialist machines. Router cutting or punching can cater for almost every need, just show us what you need and we will advise how best to economically get the job done.

## Thick and Thin

From a thin foil only 0.80 mm thick to a rigid 3.0 mm thick plate we can supply the right aluminium thickness for your application. We even have aluminium designed to bend around curved surfaces. If needed we can laminate to thicker plates to provide greater strength or rigidity.

## Artwork and Design

We can create artwork from your rough sketch, use your completed artwork or "import" most computer generated artwork. Naturally we never print until you are totally satisfied with and have checked the artwork.

## How Big or Small

Any size you want that fits onto a standard sheet size of 1000 x 650 mm. Larger sizes can be printed in multiple panels. Just tell us what you need.

## Stick Them Up or Screw Them Down

Self adhesive backing for invisible mounting or positive fixing using rivets or screws. We can advise on the best fixing system to ensure your signs and labels permanently stay in place. We also design and manufacture sign mounting systems to meet your needs.

## Need A Quote or More Information

We are pleased to give obligation free quotations and advise you of the best methods to solve your labeling and signage requirements. We are confident that our labels and signs are the most durable products available and are always made to the highest quality standards. Put us to the test!
